TRIGONOMETRY JOURNAL GRAPHING TRIG FUNCTIONS

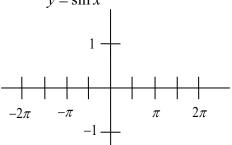

| (a) The amplitude of a wave is the distance from | the to | |
|---|---|---|
| while the period is the length of | | |
| (b) The trig functions | have amplitude while the trig | functions |
| | do NOT have amplitude because | |
| (a) The normal period of $\sin x$, $\cos x$, $\sec x$, & $\csc x$ cot x is | x is while the normal period | of tan x and |
| (a) The graph of cosine starts | and moves in a(n) | direction |
| (b) The graph of sine starts | and moves in a(n) | direction. |
| (a) A -a causes the graph of sine to | | · |
| (b) A $-a$ causes the graph of cosine to | | · |
| (c) A $-a$ causes the graph of tangent to | | |
| Phase shift is the same as a | | |
| | | |
| List the steps for finding the 5 major points on the | | f the trig |
| List the steps for finding the 5 major points on the functions except tangent. Assume you have already | e x-axis which are used to plot all o | _ |
| functions except tangent. Assume you have alread | e x-axis which are used to plot all ordy determined the phase shift and p | eriod of the graph |
| | e <i>x</i> -axis which are used to plot all or dy determined the phase shift and p 2. | eriod of the graph |
| functions except tangent. Assume you have alread 1. What is different about how you find those 5 poin When a phase shift is present, the graph of cotang | e <i>x</i> -axis which are used to plot all or dy determined the phase shift and p 2. Ints for tangent? Igent shifts its | eriod of the graph |
| functions except tangent. Assume you have alread 1. What is different about how you find those 5 poin | e <i>x</i> -axis which are used to plot all or dy determined the phase shift and p 2. Ints for tangent? Igent shifts its | eriod of the graph |
| functions except tangent. Assume you have alread 1. What is different about how you find those 5 poin When a phase shift is present, the graph of cotang | e <i>x</i> -axis which are used to plot all or dy determined the phase shift and p 2 | eriod of the graph |
| functions except tangent. Assume you have alread 1. What is different about how you find those 5 poin When a phase shift is present, the graph of cotang while the graph of tangent shifts its | e x-axis which are used to plot all ordy determined the phase shift and p 2 | eriod of the graph |
| functions except tangent. Assume you have alread 1. What is different about how you find those 5 point. When a phase shift is present, the graph of cotang while the graph of tangent shifts its a) Add a number to the equation of $f(x) = \sin x$ | e x-axis which are used to plot all ordy determined the phase shift and p | eriod of the graph |
| functions except tangent. Assume you have alread 1. What is different about how you find those 5 point. When a phase shift is present, the graph of cotang while the graph of tangent shifts its a) Add a number to the equation of $f(x) = \sin x$ b) Add a number to the equation of $f(x) = \cos x$ (a) Assume that you have determined that $b = 3$, | e x-axis which are used to plot all ordy determined the phase shift and p 2 | eriod of the graph ation $y = \cos(x - \frac{1}{x})$ |
| functions except tangent. Assume you have alread 1. What is different about how you find those 5 point. When a phase shift is present, the graph of cotang while the graph of tangent shifts its a) Add a number to the equation of $f(x) = \sin x$ b) Add a number to the equation of $f(x) = \cos x$ (a) Assume that you have determined that $b = 3$, can correctly be written. | e x-axis which are used to plot all ordy determined the phase shift and p 2 | eriod of the graph ation $y = \cos(x - y)$ e |
| functions except tangent. Assume you have alread 1. What is different about how you find those 5 point. When a phase shift is present, the graph of cotang while the graph of tangent shifts its a) Add a number to the equation of $f(x) = \sin x$ b) Add a number to the equation of $f(x) = \cos x$ (a) Assume that you have determined that $b = 3$, can correctly be written. (b) Given the graph of a trig function, the value of the second standard standar | e x-axis which are used to plot all ordy determined the phase shift and p 2 | eriod of the graph ation $y = \cos(x - y)$ e |

- 13. List the following formulas and operations.
 - a) Show how to identify each of the following using the equation y = a _____(bx + c) + d where the blank is filled in by one of the trig functions at the top of the chart.

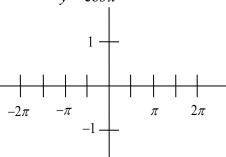

| | sin or cos | sec or csc | tan or cot |
|----------------|------------|------------|------------|
| | | | |
| Amplitude | | | |
| | | | |
| Period | | | |
| | | | |
| Phase Shift | | | |
| | | | |
| Vertical Shift | | | |

b) Sketch **two periods** of the graph of each of the 6 trig functions.

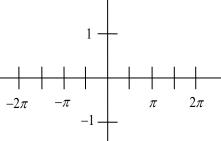

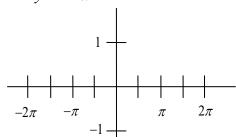

$$y = \cos x$$

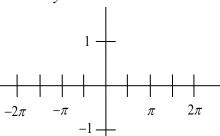

$$y = \csc x$$

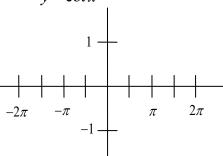

$$y = \sec x$$

 $y = \tan x$

$$y = \cot x$$

14. Given the graph of $y = 2 \sin \frac{2}{3} \left(x + \frac{5\pi}{4} \right) - 1$ below, write 3 additional equations that would result in the same graph. You may consider it to be a graph of $\sin x$ or $\cos x$.
