

INTRO TO TRIG REVIEW

Things to list

- a) 3 trig func opp, adj, hypot
- b) 6 trig func x, y, r

- d) All Star Trig Class
- e) Special angle table

1. Coterminal angles

4/ Poss. or Imposs

$$2 \sec \alpha + 7 = -\frac{6}{7}$$

$$\cancel{2} \sec \alpha = -\frac{1}{2}$$

$$\sec \alpha = -\frac{1}{2}$$

Imposs.

2 $\sin(-\theta) = -\sin(\theta)$

$$\begin{cases} \cos(-\theta) = \cos \theta \\ \sec(-\theta) = \sec \theta \end{cases}$$

$$\begin{cases} \tan(-\theta) = -\frac{3}{7} \\ \tan \theta = \frac{3}{7} \\ \cot(-\theta) = -\frac{7}{3} \end{cases}$$

3) Use All Star Trig Class

5-7) DRAW A PICTURE!

5-7) Given $\cos \theta = \frac{2\sqrt{3}x}{5r} + \tan \theta < 0$, find $\csc \theta$.

$$y = -\sqrt{13}$$

$$y^2 + (2\sqrt{3})^2 = 5^2$$

$$y^2 + 12 = 25$$

$$\sqrt{y^2} = \sqrt{13}$$

$$y = \pm \sqrt{13}$$

$$\csc \theta = \frac{r}{y}$$

$$= \frac{5\sqrt{13}}{-\sqrt{13} \cdot \sqrt{13}}$$

$$= -\frac{5\sqrt{13}}{13}$$

8/ Write $\cos 28^\circ 16'$ in terms of its cofunction.

$$\begin{array}{r} 89^\circ 60' \\ - 28^\circ 16' \\ \hline 61^\circ 44' \end{array}$$

$$\boxed{\sin 61^\circ 44'}$$

complementary function

Write $\sec \frac{5\pi}{11}$ in terms of its cofunc.

$$\begin{aligned} & \frac{\pi}{2} - \frac{5\pi}{11} \\ &= \frac{11\pi}{22} - \frac{10\pi}{22} \\ &= \frac{\pi}{22} \end{aligned}$$

$$\boxed{\csc \frac{\pi}{22}}$$

9-11) Special angle values

Convert to degrees

$$\frac{25\pi}{6} \cdot \frac{30^\circ}{180^\circ} = 75^\circ$$

$$1020^\circ \cdot \frac{\pi}{180^\circ} = \frac{1020}{180} \pi = \frac{51\pi}{9} = \frac{17\pi}{3}$$

Do not memorize.

$$S = r\theta \quad A = \frac{1}{2}\theta r^2 \quad \omega = \frac{\theta}{t} \quad v = \frac{S}{t} = \frac{r\theta}{t} = r \cdot \omega$$

A pizza is divided into 12 slices. What is the area of each slice if the pizza has a diam. of 18"?

$$A = \frac{1}{2}\theta r^2 = \frac{1}{2} \cdot \frac{30^\circ \pi}{180^\circ} \cdot 9^2 = 21.2 \text{ in}^2 \quad \frac{360^\circ}{12} = 30^\circ$$

$r = 6400 \text{ km}$

Find distance between A + B

$$S = r\theta$$

$$S = 6400 \cdot \left(\frac{46^\circ \pi}{180^\circ} \right) = 5188 \text{ km} \approx 5100 \text{ km}$$

* Superman spins at a rate of 2120 rev/min.

* His arm span is 78" How fast are the tips of his fingers moving in ft/sec.

$$1 \text{ rev} = 2\pi \text{ rad}$$

$$\text{Linear vel.} = \frac{r\theta}{t} = \frac{39 \cdot (2120 \cdot 2\pi)}{1 \text{ min}}$$

$$= 165360\pi \frac{\text{in}}{\text{min}} \cdot \frac{1 \text{ ft}}{12 \text{ in}} \cdot \frac{1 \text{ min}}{60 \text{ sec}}$$

$$\approx 721.5$$

$$\approx 720 \frac{\text{ft}}{\text{sec}}$$

NAVIGATION

Roscoe heads across the field in a snowstorm in the direction 50° & travels 1600 ft. He then turns & travels 1000 ft in the direction 320° . What distance & direction must he travel to return home.

$$\begin{aligned}\tan A &= \frac{1600}{1000} \\ \tan^{-1}(1600/1000) &= 58^\circ\end{aligned}$$

$$\begin{aligned}90^\circ \\ + 50^\circ \\ + 58^\circ \\ \hline 198^\circ\end{aligned}$$
